

EZEKIAL POND  
PLYMOUTH

AREA : 36 ACRES

## **EZEKIEL POND (Plymouth)**

### **General Information:**

This is a small, 36-acre pond with an average depth of 8 feet and a maximum depth of 19 feet. Transparency is about 13 feet and submerged vegetation is common. The water is known to be very acidic. No dedicated public access exists, but anglers can park along Bourne Road and pass on foot over unimproved land to gain entry. The pond was reclaimed in 1952, and again in 1958.

### **Fish Populations:**

The pond was last surveyed in the summer of 1994, when it was found to support yellow perch, bluegill, largemouth bass, brown bullhead, pumpkinseed, chain pickerel and banded killifish.

### **Fishing:**

Abundant populations of yellow perch and largemouth bass offer attractive fishing opportunities, which are also provided, to a lesser extent by chain pickerel and brown bullhead.

Another nearby water worth a visit is Big Sandy Pond.
